

SAMPLE DATA · invented figures for demonstration

What does it cost to win a customer?

Period: October 2025. Marketing spend divided by the customers it actually brought in (a customer's first ever job), month by month.

How final is this data?

September 2025

Locked

September 2025 is locked (closed 2 Oct 2025). These numbers won't change.

October 2025

Locked

October 2025 is locked (closed 4 Nov 2025). These numbers won't change.

October 2026

Incomplete

October 2026 is still in progress: figures to 6 Oct only.

October 2025

\$261

September \$269

October last year

\$253

34 new customers from \$8,600

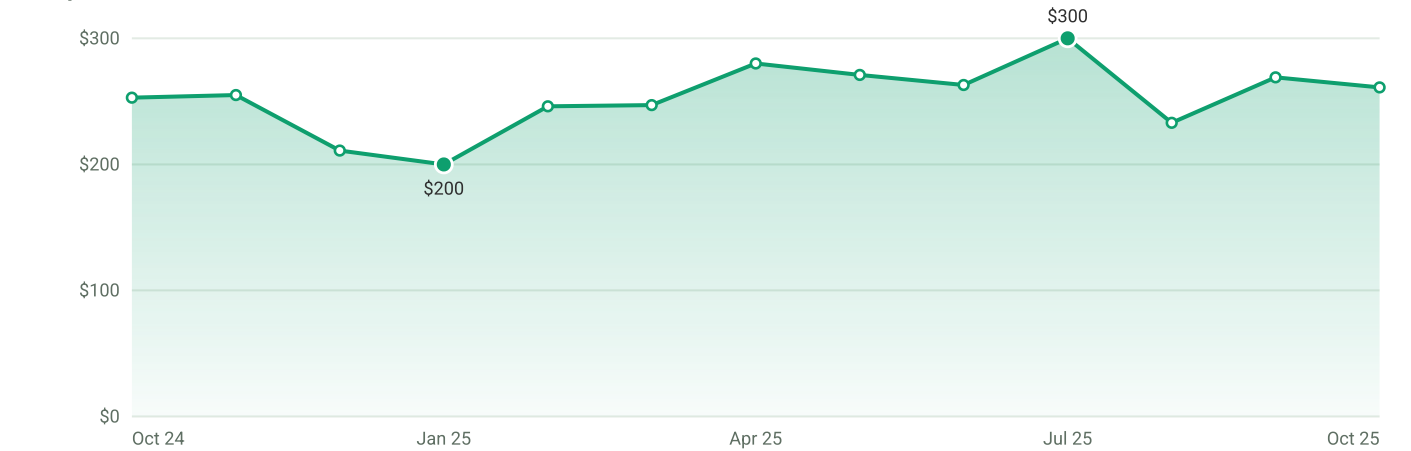

Year to date (Jul to Oct 2025)

\$264

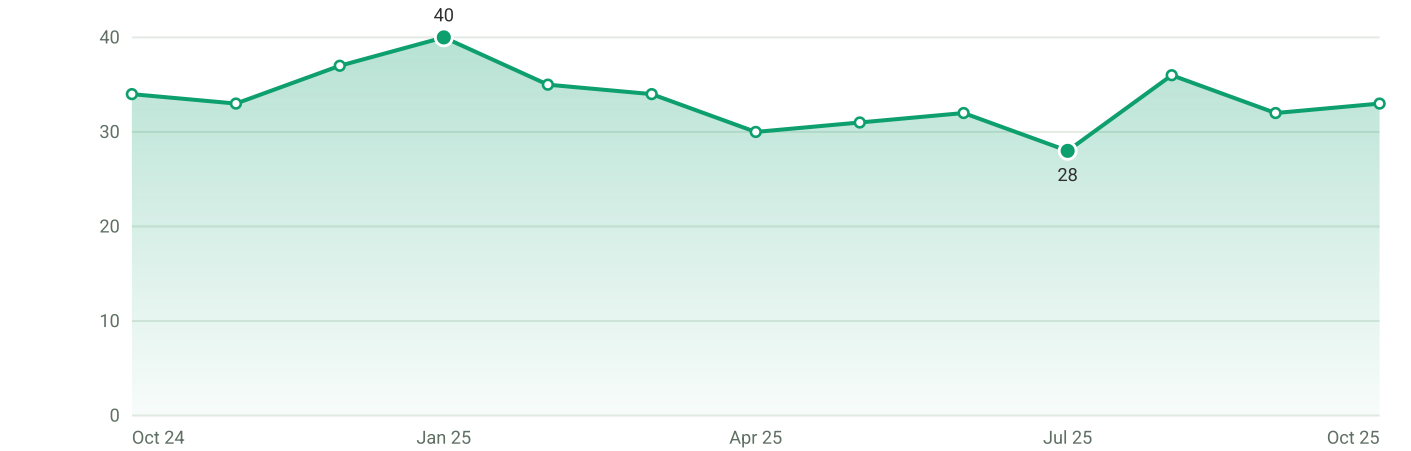

same period last year: not in the data

Cost to win a customer, by month

All · \$ per new customer

All · New customers

Customers are counted in the month of their first job. Every month, by line, is in the spreadsheet download.

What it shows

33 new customers came from \$8,600 of marketing in October, against 32 from \$8,600 in September: \$261 each, down from \$269.

What you'd do about it

A lower cost per customer with steady spend usually means the marketing mix is working. Recording where each new customer came from shows the cost per channel.
